

Start CarboFix registry

Start data collection

Great news! The protocol has been approved by the the medical research ethics committee. The international multicenter Carbon PEEK registry is ready to start. All participating centers should be able to enter their data in the online Castor registry. Please contact Z.Rijs@lumc.nl in case you encounter any problems or if your center requires a data transfer agreement (DTA). Centers from the EU don't need internal IRB approval and can start collecting data immediately. Over 150 cases have already been uploaded in Castor!

- Online Castor registry
- Easy to include patients
- Approval science committee
- Approval medical research ethics committee
- ... Start data collection

Invitation to send in research proposals

We are excited to have you on board in the registry. Currently, 23 centers have registered in the online Castor Carbon PEEK registry, and the list of participating centers is still growing. This registry is designed to be an open access registry which continuously includes new CFR PEEK implants. It will provide an ongoing database to assess the safety and effectiveness of CFR PEEK implants. Currently, there are already four planned papers on the CFR PEEK implants. We kindly invite you to send in research proposals, we are more than happy to facilitate the required data.

In case another center wants to join the registry please send an email to Z.Rijs@lumc.nl with the name and email address of the contact person

If there are any other questions or suggestions please let us know!
